**FACULTY
PRESENTATIONS:**

"Rehabilitation and Nutritional Therapies in a 16-year-old male presenting with mid lumbar non-radicular pain"

Presentation describing the anticipated effects of chiropractic rehabilitation and nutritional therapies for a 16-year-old male basketball player presenting with focal mid lumbar back pain resultant from an L3 pars defect. Faculty/student presentation, July, 2000.

"Case review: Successful treatment of an elderly gentleman with full leg radiculopathy contributory to an L3-S1 bilateral decompression"

Case review of a patient under my care with 95% resolution in right leg radicular symptoms after 18 visits. Patient suffered full leg radiculopathy and weakness resultant from degenerative intervertebral foraminal stenosis. Patient was bilaterally decompressed from L2-S1 with full physical therapy rehabilitation. No significant improvement. Diagnosis was failed back surgery syndrome resultant from scar tissue proliferation. Treatment consisting of orthotics, diversified manipulative techniques, Cox Flexion-Distracton, core muscular strengthening and interferential current brought 95% resolution in 18 patient visits. Grand Rounds presentation, April, 2001.
